Less More

Will it blend nicely?
Or will it oscillate madly?
(Hint: Mostly the latter)

The Volumefink is not meant to be a pristine, perfect volume control. It is meant to be versatile, inspiring, unexpected, odd and a little bit crazy.

In many ways it is a small tribute to my cat Batfink, who had Cerebellar Hypoplasia. CH causes erratic motor-control of limbs, but he never let that stop him getting into trouble and we hope you'll follow in his pawsteps and smash your boundaries too.

It is also chock full of gorgeous parts, such as the genuine SCI knob, genuine Hammond enclosure and the Japanese Lumberg jacks. This probably doesn't make it 'better' in any way, but we don't care, we just like nice parts and hope you do too.

You may well find new ways to use this box that we never expected, and if you do we'd love to hear about it! Be free, be wild and make noise!
